

Richardson Eyres launches 're cloud express' built on HP Server Technology & VMware vCloud™

Company enhances its solutions portfolio to include on demand virtual infrastructure offering

London, 21st November, 2011

Richardson Eyres, a leading provider of IT solutions and services, today announced the launch of *re cloud express* - convenient, scalable and reliable low-cost cloud.

re cloud express is the perfect entry point into cloud computing – providing businesses with an ideal means to evaluate then adopt the cloud. Unlike many other entry-level cloud solutions, *re cloud express* gives users access to an experienced team of cloud computing experts with Richardson Eyres' professionals on hand to help plan, roll out and maximise the solution.

"Enhancing our solutions portfolio to include re cloud express was a natural progression, having long provided our customers with IT solutions and services focussed on saving time and making them more profitable. Where re cloud express differs from other entry level cloud services is our dedicated team who have the industry insight and solution experience that businesses need to help them plan, deploy and utilise the cloud successfully. Add to this the fantastic functionality provided by VMwares vCloud Director and you have the perfect package" commented Adam Kemp, CEO, Richardson Eyres.

Kemp added *'Combining our re cloud express offering with Navicloud, delivered by Richardson Eyres and Navisite, we can now deliver cloud services to meet the full range of business requirements, from simple test and development environments to fully managed cloud services.'*

Designed to help businesses accomplish ad hoc tasks like functionality testing and application development, or to provide additional disaster recovery and infrastructure capacity *re cloud express* provides flexibility and scalability whilst users pay only for what they use, when they use it.

Available in both managed and self-service versions and convenient monthly billing options *re cloud express* users can configure their environment from a basic but fully capable server up to a high-end configuration with up to eight cores, 8 GB memory and 2 TB of disk space.

About Richardson Eyres
